6장. MVC 웹 애플리케이션

상품 관리

➤ 상품 관리 프로젝트 만들기 – MVC 패턴

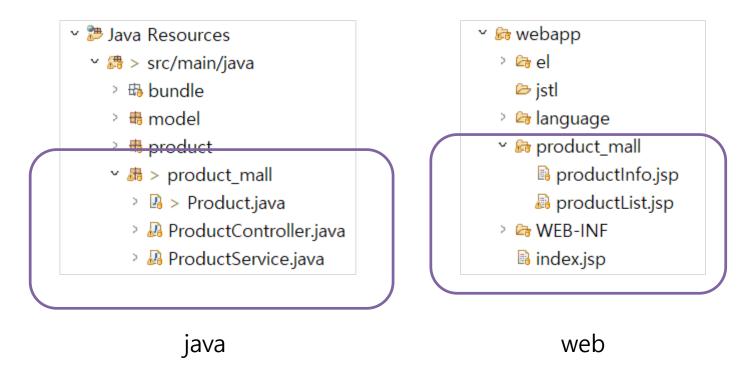

전체 상품 목록을 보여주고 상품을 선택하면 세부 정보를 보여주도록 구현함

- 1. Model(모델 구현) Product.java, ProductService.java
- 2. View(뷰 구현) productList.jsp, productInfo.jsp
- 3. Controller(컨트롤러 구현) ProductController.java
- ✓ 모델 구현은 DB를 사용하지 않고 자료 구조(Map)를 사용

▶ 상품 관리 프로젝트 만들기 – MVC 패턴

프로젝트 계층 구조

▶ 상품 관리

상품 목록

번호	상품명	제조사	가격
1	iPhone 17	애플(Apple)	1200000
2	LG Gram	LG 전자	2000000
3	Galaxy S25	삼성 전자	1500000

상품 정보

● 상품 코드: p101

• 상품 이름: Galaxy S25

• 제조사: 삼성 전자

• 가격: 1500000

• 등록일: 2025. 2. 25

<u>상품 목록으로</u>

➤ Product DTO 생성

```
public class Product {
                                               product.java
   private String pid; //상품번호
   private String pname; //상품명
   private String maker; //제조사
   private int price; //가격
   private String date; //등록일
   //생성자
   public Product(String pid, String pname, String maker,
           int price, String date) {
       this.pid = pid;
       this.pname = pname;
       this.maker = maker;
       this.price = price;
       this.date = date;
```

```
public String getPid() {
    return pid;
public void setPid(String pid) {
    this.pid = pid;
public String getPname() {
    return pname;
public void setPname(String pname) {
    this.pname = pname;
public String getMaker() {
    return maker;
public void setMaker(String maker) {
   this.maker = maker;
public int getPrice() {
    return price;
public void setPrice(int price) {
    this.price = price;
```

➤ 모델(Model) 역할

```
public class ProductService {
                                                   ProductService.java
   Map<String, Product> products = new HashMap<>();
   public ProductService() {
       //Product 객체 생성
       Product p1 = new Product("11", "Galaxy21", "삼성 전자",
                1000000, "2023. 03. 16");
       Product p2 = new Product("12", "LG 그램", "LG 전자",
                1400000, "2023. 04. 16");
        Product p3 = new Product("13", "iPhone", "Apple",
                1200000, "2023. 05. 16");
       //Map에 저장
        products.put("11", p1);
        products.put("12", p2);
        products.put("13", p3);
```

<u>상품 관리 프로젝트</u>

➤ 모델(Model) 역할

```
//전체 상품 목록 보기
public List<Product> getProductList(){
    return new ArrayList<>(products.values());
}

//제품 상세 내역
public Product getProduct(String pid) {
    return products.get(pid);
}
```

➤ Product 컨트롤러(서블릿)

ProductController.java

```
@WebServlet("/pcontrol") //http://localhost:8080/jweb02/pcontrol?action=list
public class ProductController extends HttpServlet {
    private static final long serialVersionUID = 1L;
    ProductService service;
    public ProductController() {
        service = new ProductService();
    }
    //doGet(), doPost() 사용해되 됨
    protected void service(HttpServletRequest request, HttpServletResponse re
       //action 패턴
        String action = request.getParameter("action");
        String nextPage = "";
```

➤ Product 컨트롤러(서블릿)

```
if(action.equals("list")) { //상품 목록
    List<Product> productList = service.getProductList();
    request.setAttribute("productList", productList); //모델 생성
    nextPage = "/product_mall/productList.jsp"; //뷰 경로
}else if(action.equals("info")) {
    String pid = request.getParameter("pid");
    Product product = service.getProduct(pid);
    request.setAttribute("product", product);
    nextPage = "/product mall/productInfo.jsp";
//포워딩
RequestDispatcher rd =
        request.getRequestDispatcher(nextPage);
rd.forward(request, response);
```

```

■ Product DAO – 상품 등록 메서드

```
public class ProductDAO {
   //상품 등록
   public void addProduct(Product product) {
        String sql = "insert into product (pid, pname, maker, price, regdate) "
                + "values (?, ?, ?, ?, ?)";
        try(Connection conn = DBUtil.getConnection();
            PreparedStatement pstmt = conn.prepareStatement(sql)){
                pstmt.setString(1, product.getPid());
                pstmt.setString(2, product.getPname());
                pstmt.setString(3, product.getMaker());
                pstmt.setInt(4, product.getPrice());
                pstmt.setString(5, product.getRegdate());
                pstmt.executeUpdate();
        }catch(Exception e) {
            e.printStackTrace();
```

■ Product DAO – 상품 목록 메서드

```
public List<Product> getProductList(){
    List<Product> list = new ArrayList<>();
    String sql = "select * from product";
    try(Connection conn = DBUtil.getConnection();
        PreparedStatement pstmt = conn.prepareStatement(sql);
        ResultSet rs = pstmt.executeQuery()){
        while(rs.next()) {
            Product product = new Product(
                rs.getString("pid"),
                rs.getString("pname"),
                rs.getString("maker"),
                rs.getInt("price"),
                rs.getString("regdate")
            );
            list.add(product);
    }catch(Exception e) {
        e.printStackTrace();
    return list;
```

■ Product DAO – 상품 상세 보기 메서드

```
public Product getProduct(String pid) {
   Product product = null;
   String sql = "select * from product where pid = ?";
   try(Connection conn = DBUtil.getConnection();
        PreparedStatement pstmt = conn.prepareStatement(sql)){
        pstmt.setString(1, pid);
        ResultSet rs = pstmt.executeQuery();
        if(rs.next()) {
            product = new Product(
                rs.getString("pid"),
                rs.getString("pname"),
                rs.getString("maker"),
                rs.getInt("price"),
                rs.getString("regdate")
            );
    }catch(Exception e) {
        e.printStackTrace();
    return product;
```

■ Product DAO – 상품 삭제 메서드

```
public void deleteProduct(String pid) {
   String sql = "delete from product where pid = ?";

   try(Connection conn = DBUtil.getConnection();
        PreparedStatement pstmt = conn.prepareStatement(sql)){
            pstmt.setString(1, pid);
            pstmt.executeUpdate();
   }catch(Exception e) {
        e.printStackTrace();
   }
}
```

■ Product DAO – 상품 수정 메서드

```
public void updateProduct(Product product) {
    String sql = "update product set pname=?, maker=?, price=?, regdate=?"
            + "where pid = ?";
    try(Connection conn = DBUtil.getConnection();
        PreparedStatement pstmt = conn.prepareStatement(sql)){
            pstmt.setString(1, product.getPname());
            pstmt.setString(2, product.getMaker());
            pstmt.setInt(3, product.getPrice());
            pstmt.setString(4, product.getRegdate());
            pstmt.setString(5, product.getPid());
            pstmt.executeUpdate();
    }catch(Exception e) {
        e.printStackTrace();
```

■ ProductService – 서비스 계층

```
public class ProductService {
   ProductDAO dao = new ProductDAO();
   //상품 등록
    public void addProduct(Product product) {
        dao.addProduct(product);
   //상품 목록
    public List<Product> getProductList(){
        return dao.getProductList();
   //상품 상세
    public Product getProduct(String pid) {
        return dao.getProduct(pid);
```

■ ProductService – 서비스 계층

```
//상품 삭제
public void deleteProduct(String pid) {
    dao.deleteProduct(pid);
}

//상품 수정
public void updateProduct(Product product) {
    dao.updateProduct(product);
}
```
